

## Appendix D - UK PSC Paediatric Participant Reconsent and Resampling Version 1 (08.03.18)

### 1. Reconsent Process

*No more than once per year:* UK PSC Data Manager (DM) contacts paediatric site, asking them to update patient consent to the study at a forthcoming clinic appointment.

UK PSC supplies consent report to site, to check patient status and provide any updates.

Sites checks patient status and updates UK PSC DM of any changes (no longer suitable to participate; deceased etc.). DM makes database updates.

DM resupplies current versions of Parent/Guardian and child PISs, consent and assent form (with patient study ID inserted) and freepost envelope

At routine clinic appointment site gives current PIS, consent and assent form to parent/guardian and child (or can give to child alone, if aged 16-17 yrs).  
NB Assent forms are optional, and intended for children aged 6-15 yrs.

Parent/guardian and child raise any questions and sign consent form (parent/guardian) and assent form (child), if happy to do so. Children aged 16-17yrs can sign adult Consent Form.

Site returns completed consent and assent forms to UK PSC, in freepost envelopes provided.

UK PSC DM checks completion of consent and assent forms, logs as events on study database and uploads documents. NB Sites can view these documents and print copies.

## 2. Resampling Process
